IN THE CLAIMS:

Please correct the following claims submitted in the Response as indicated:

- 31. (New) An apparatus for removing unwanted moisture from a structure, the structure including a structural surface, the apparatus comprising:
 - a vacuum mat having an upper surface and a lower surface and a first nonporous section, the first section including an array of protrusions engagable with the structural surface <u>for</u> supporting the mat on the structural surface and permitting fluid flow between the lower surface and the structural surface;
 - the mat further including a second section adjoining the first section and having a vacuum port, the port providing fluid communication through the mat.
 - 32. (New) The apparatus of claim 1, wherein the mat is [[a]] of unitary construction.
